

# Can Toby Really Help You Organize Your Chrome Tabs?

Toby is a useful chrome tab organizer that can be set up as a chrome extension. It has a low learning curve, is easy to set up, and is easy to manage going forward into projects where you need specific tabs pulled up.

Toby is a better solution to keep your chrome tabs in check and reinforce good organizing habits, ensuring you are as organized as you can be. Let's start getting those tabs into shape [HERE!](#)

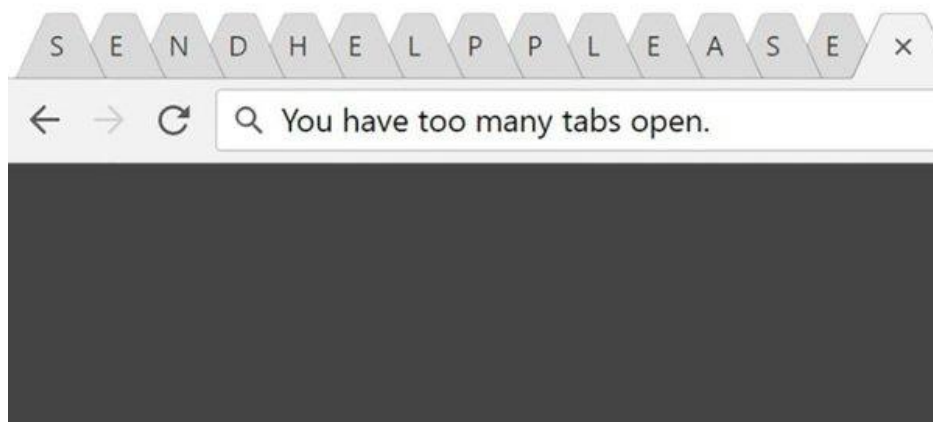

Below we will explain what Toby is, how it can benefit you, and how you can use it to improve the way you work, so without further delay, let's get into it!

## What Is Toby?

Toby is a visually pleasing workspace where your tabs can be arranged to fit your preference and use for them. This can be arranging your tabs by tools, resources, projects, helpful shortcuts, websites for a specific use, or pretty much anything your chrome tab is dying to dump into intentional, organized collections.

May I add that this tool is very user-friendly?

## Who Is Toby For?

Toby is used for businesses and individuals that spend the majority of time online and have the need to switch back and forth between multiple tabs.

Generally, it can also be used for people that need an efficient form of saving important tabs. The people that find Toby the most useful are those who have accumulated so many tabs that their chrome bar has become extremely crowded and find it difficult to pull up the right webpage.

The solution to your tab chaos would be to set each tab as a bookmark...

but that takes *precious* time you could dedicate to being productive elsewhere, don't you agree?

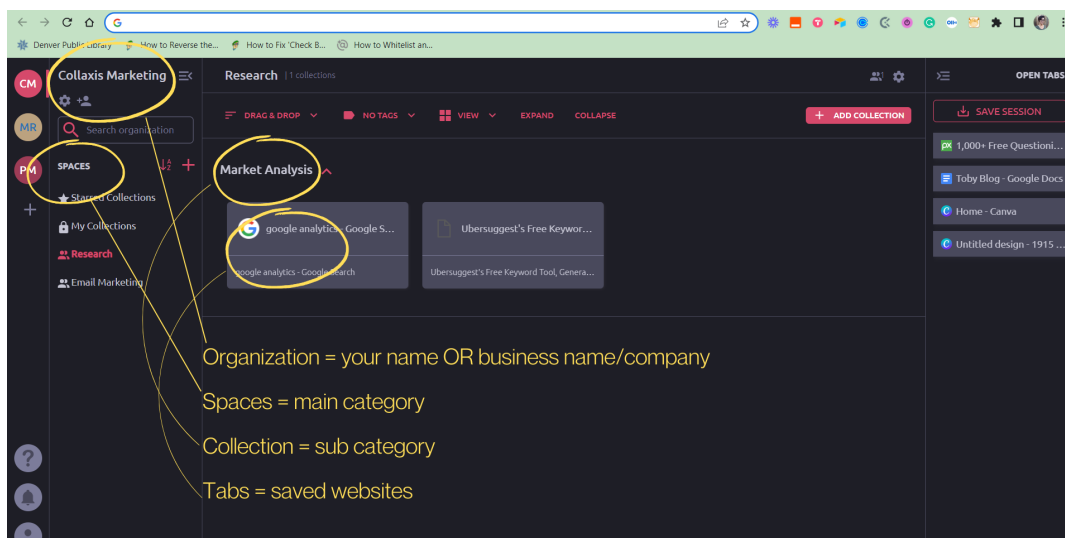

## How can Toby help me?

If you're the type of person that adds 10 new tabs (or more) to your chrome browser and doesn't close them for fear you may need them soon, this tool is for you.

*PSST...* a great function that Toby has if you're in a hurry is the “**save session**” function. This function saves all the tabs you are currently using and stores them into a “collection”, this is great if you have to log off your computer in a hurry, or need to start a clean slate of tabs but need the previous tabs for later use.

For a better understanding and representation of what your business AND personal tabs will look like using Toby, we show you examples of how the average business or individual may use this tool below.

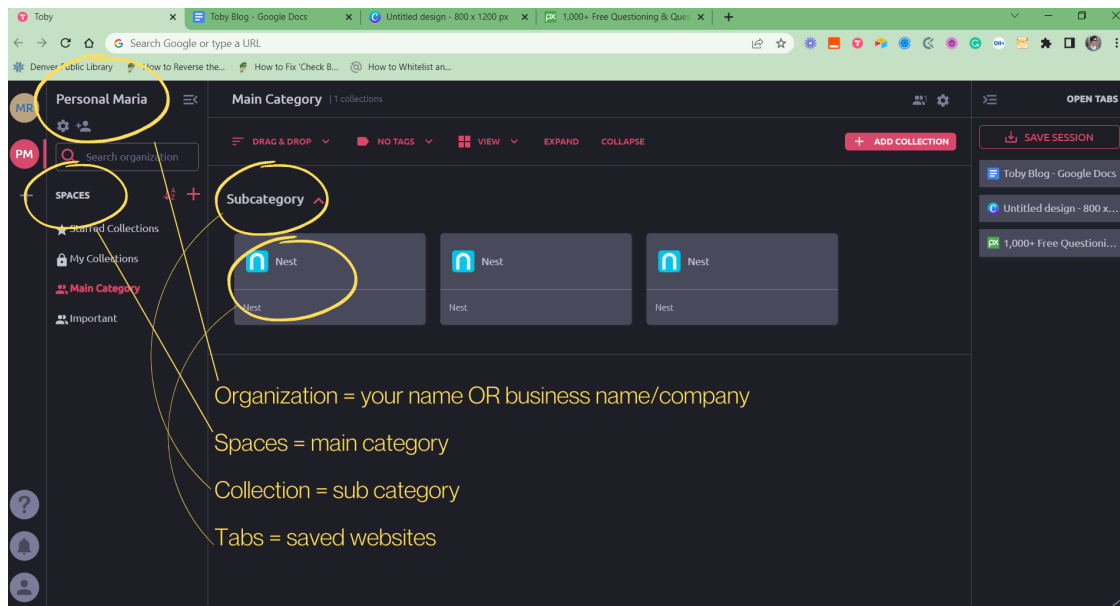

## If you're a business:

Dividing your tabs by department would be what you add as your “space” (main category), from here you will break it down further into what is called a “collection” (subcategories), then break it down further to add the different teams that are managing a particular project or campaign in your marketing department.

Within the “collections” you would nest the project resource website pages that are being used for the team that it is nested under, this allows the team to refer back to them as needed.

Another thing you can do within a collection is make notes that can be used to clarify and collaborate best with your team.

**If you're an individual:**

Your organization would be your name or nickname to help you identify that it is for personal use, for eg. John's personal space.

You would then create your spaces (main categories), followed by collections (subcategories) and within the collections, you would gather and nest websites you use frequently, resources you may need, pages you haven't finished browsing, and save ones that you may already have pulled up.

## What Do Other People Think About It?

When it comes to finding the right product for you it's important to know how it works and if it's worth giving it a try. To help make your choice easier, here are what 4 different people said when they were asked what they liked best about the Toby tab organizer:

- I like that I can create different collections composed of different sites that I'm using in a project. I also like the fact that I can easily save a SESSION. That means I can save the currently open browsers in one click than having to save them one by one
- Having collections of tabs, the possibility to open multiple tabs with one click, ease of use, collection folders (personal vs. work), quick save of all browsing tabs to be reopened later, and ability to rename each "tab" once saved similar to that of a bookmark
- It's really easy to use and sort my bookmarks and info. I used a lot of solutions before and it's one of the best I could find. It doesn't take much CPU and it's easy to sort things.
- I work online, all my tools are web-based and so I need to be able to access them easily. I've used Toby for many years - I used to bookmark sites before but that can really clutter your browser. Toby is awesome - and sharing link collections is such a good feature.
